

KOI HERNANDEZ | Experience Design

Impactful design through creativity & strategy.

I blend creativity with strategy, turning intangible ideas into concrete solutions. Guided by data and a deep-rooted sense of empathy, he has a refined distinct approach to design that is as impactful and aesthetically pleasing. My multi-disciplinary and versatile skillset has been instrumental in helping clients improve their customer experience, foster a deeper understanding of their products and streamlining/unifying their visual assets.

Cross-team collaboration

Client experience

I've worked with global companies across healthcare, finance, life sciences, and technology, delivering intuitive, user-centered solutions that drive efficiency and innovation. From establishing design systems for an investment bank to transforming marketplaces for a pharmaceutical company, I've consistently delivered impactful results. My work with top tech companies has revitalized internal platforms, improved user satisfaction, and set new standards for future development—all through a collaborative, human-centered design approach.

Elevating Design Efficiency: Building a Unified Component Ecosystem

Client: A leading U.S.-based financial services institution.

"I'm using Form Builder and it's amazing! It's saving me so much time to create a flow that I can't even describe how happy I am that this is built. I love it!"

WHY

Designers across multiple teams lacked a centralized, reliable resource for building new experiences, leading to inefficiencies and inconsistencies. The client needed a scalable design system that could serve as both a creative launchpad and a source of truth—especially for card-related experiences.

WHAT

Led the creation of a global Figma library shared across three teams, consolidating commonly used components, patterns, and templates. For my team, I built a tailored design ecosystem that enabled rapid prototyping and streamlined delivery. This included full documentation of all card experiences and close collaboration with developers and product managers to ensure alignment and usability. To support long-term scalability and team enablement, I introduced new ways of working through the use of Figma variables to shift between content, and branching for version control and maintenance.

WOW

Cut time-to-design in half through the introduction of innovative components like Form Builder. The system became a trusted reference point for designers, developers, and PMs to understand the current state of their products. Delivered a multi-library architecture consisting of five interconnected libraries, each serving a distinct purpose:

- A foundation library for core patterns and templates.
- A template library for reusable design modules.
- A full experience library capturing end-to-end customer journeys.
- Plus two additional libraries supporting specialized use cases and team-specific needs.

UX/UI Design

Revolutionizing Retail Pharmacies: Establishing a Marketplace with Intuitive, Holistic Customer Journeys

Client: A leading global pharmaceutical solutions organization.

"Koi Hernandez has been so great to work with on the Marketplace project. He is thoughtful in his designs, asks the right questions, delivers great designs in an organized and thorough manner. He is forward thinking and has brought so much value to the design of this project."

WHY

The client identified a \$1.5 billion missed opportunity as their customers purchased front-of-house products from competitors after buying prescription drugs through their platform. To capture this revenue and expand innovation, they sought to create a Marketplace to streamline the customer purchasing process within their own ecosystem.

WHAT

I spearheaded the design of the core Marketplace experience, covering key eCommerce features like browsing, cart management, and account/order management. I also facilitated and led user interviews to gather feedback and insights on early designs, ensuring that the user experience was aligned with customer needs. Additionally, I worked closely with developers to ensure pixel-perfect implementation and collaborated with the Product Owner and Business Analysts to refine requirements. Beyond the core design, I contributed to the larger design team by sharing feedback, insights, and best practices, helping shape the overall design team experience.

WOW

The MVP launch received positive feedback, with customers highlighting its ease of use. The new Marketplace streamlined the purchasing process, laying the foundation for future Marketplace initiatives. In addition to the product impact, I contributed to improving the overall design process and strengthened the Design QA process, elevating the team's efficiency and ensuring higher quality outcomes.

UI Design

Banking on Design: Powering Efficiency Through Comprehensive Design Systems

Client: A global investment bank and financial services company.

"I learned a lot from working with Koi ...Though he was the XD lead, my voice was heard as an equal. Not only did I get the opportunity to voice design decisions, but Koi has so much knowledge and acted as a mentor to teach me the ins and outs of Figma, design systems, and sprint planning. He deserves recognition for not only his knowledge and ability to exceed expectations for client work, but also for making time for other team members."

WHY

The client sought to re-envision and simplify the call center agent experience for their wide range of products. The goal was to centralize their service offering, which spanned across multiple product lines, agent workflows, and data platforms. The future state "North Star" vision aimed to improve operational efficiency by creating a unified platform with a modular dashboard and streamlined agent interactions with data providers.

WHAT

As the Lead Designer for the Design Systems Pod, I led the creation of a design system to ensure consistency across multiple design pods working on different project streams. I provided leadership and support across pods to maintain coherence in the user experience and coordinated with the client's development teams to ensure timely delivery of components. Additionally, I facilitated cross-program collaboration, leveraging learnings and understanding the unique needs of each pod. Acting as a design system SME (Subject Matter Expert), I partnered closely with the client's design leads to ensure the success of the initiative.

WOW

The result was a holistic and mature design system that included content and governance guidelines, providing the client with independence and the resources to continue the work after our team transitioned off the project. The design system significantly strengthened collaboration across business units, optimized asset organization, and enabled a cohesive, frictionless digital experience. The client now has a comprehensive library of design assets, requirements, and governance practices, ensuring a unified and efficient operational process for the future.

UX/UI Design

Revitalizing retail: Streamlining Life Sciences Shopping With Intuitive Design

Client: A company that develops, manufactures, and sells products for biomedical testing and life sciences research.

"Koi has done an outstanding job organizing the design discovery sessions with the client. He had to start from a blank slate, and extract from the client team design requirements for the project. He had to learn and understand the existing system, and understand the clients needs. All of this was a challenge with a client that was variable with their engagement. Even after several weeks of further technical discoveries and clarity in the business requirements, the designs detail Koi provide is holding solid."

WHY

Since the launch of their Storefront in 2018, the client noticed that parts of the shopping experience had become outdated and cumbersome. Customers highlighted the complex steps involved in placing specialized orders, as well as difficulties in managing accounts, tracking orders, and scheduling deliveries. The retailer needed a more simplified and intuitive shopping experience to better serve their customers and improve order management.

WHAT

As the Design Lead, I was responsible for organizing and scheduling discovery workshops and planning weekly deliverables. I also advocated for necessary resources and information to ensure the success of the engagement. In my role as UX & UI Designer, I identified and prioritized business needs, developed wireframes and sketches, and produced high-fidelity designs and prototypes. Additionally, I led usability interviews to ensure the user experience aligned with customer expectations.

WOW

Within six weeks, I delivered beyond the initial scope of 18 screens and created a rudimentary design system to guide future teams. My work was instrumental in shaping the next phase of the project, including technical discovery and development. Despite the short timeline, I advocated for usability testing and laid the groundwork for future design teams by providing a scalable design system. Even after my engagement ended, I received feedback that my designs are still in use today, proving their lasting value and effectiveness.

Redefining Knowledge Management: Elevating Tech With UX Innovation & Efficiency

Client: A leading global technology company specializing in online advertising, cloud computing, and artificial intelligence.

“Koi has a calm demeanor which proved to be useful when dealing with stakeholders who constantly change their minds. Despite unclear feedback, constant design changes, and an unclear scope (in the beginning of the project), Koi always remained level headed and provided the best design recommendations he could at any given moment.”

WHY

The client's technical consultant group faced significant inefficiencies due to the lack of a central repository for housing, discovering, and promoting their existing solutions. The fragmented system led to outdated content, effort duplication, and poor discoverability. Consolidating these systems into a single, unified platform with a central source of truth was critical to solving these productivity issues.

WHAT

I collaborated with a team of UX and visual designers to create a unified solutions hub with an underlying content management system. I personally developed wireframes and high-fidelity mockups, ensuring a seamless user experience. This hub allowed both technical consultants and Sales teams to discover and access relevant solutions and case studies. Additionally, I worked closely with stakeholders to capture the right information and align expectations with project goals. I also conducted usability tests to validate designs and refine the final product based on user feedback.

WOW

By adopting a human-centered approach and agile methodology, we designed and tested site concepts through multiple stages involving a diverse set of users. This ensured the solution met the needs of individuals across various regions and organizational levels. In addition, we evolved the group's brand identity to align with adjacent brand elements, providing a seamless user experience across platforms. The project successfully revitalized the internal knowledge management system, boosting site usage and ratings from 2 to 4.3 out of 5 stars. The redesign also reduced repetitive tasks, increased transparency, and helped users in client presentations. This transformation established a new standard for visual guidelines, shaping the blueprint for future product development.
